A/V System Instructions | TN-110

01 Turning Projector On

1) Use the projector remote attached to the instructor’s desk to turn the projector on.
2) Ensure that the remote switch is set to “ON”. This switch is located on the bottom of the remote.
3) Aim the remote at the projector and press the “ON” button located on the top of the remote. The projector will startup.
4) It will take less than a minute to warm up.

02 Using Desktop Computer

1) Press the “INPUT 1” button located on the top of the remote until “Input 1 RGB (PC Analog)” is displayed on the top left of the projector screen.
2) Please ensure “Projector mode” is active and set to “Duplicate”.
3) This is done by pressing the following key combination:

   ![Projector Remote](image)

4) If you are using a Windows machine, please ensure “Projector Mode” is active and set to “Duplicate”. This is done by pressing the following key combination:

   ![Projector Remote](image)

   6) This key combination works with Windows Vista/7/8/8.1

03 Using Laptop/Personal Devices

1) Press the “INPUT 1” button located on the top of the remote until “Input 1 RGB (PC Analog)” is displayed on the top left of the projector screen.
2) Plug the VGA cable provided on the instructor desk to your device.
3) Your Laptop should now be projecting on the screen.
4) If you are using a Windows machine, please ensure “Projector Mode” is active and set to “Duplicate”.
5) This is done by pressing the following key combination:

   ![Projector Remote](image)

Note: The projector will automatically switch over to a connected laptop if the desktop computer was already projecting.

04 Turning the Projector off

1) Press the “Stand-by” button located on the top of the remote twice to turn the projector off.
2) Pressing the Stand-by button once will prompt you “Power Off?” Press it a second time to confirm this command.
